Output: Displays the discounted amount if promo code correct otherwise displays promo incorrect promo code.

Functional Requirement seller account

Description: Seller Account.

Input: Enter the details of your store, product and payment.

Processing: Add the details and store to the database of the daraz.

Output: Displays account or store created successfully.

Functional Requirement refund and return

Description: Refund and return.
Input: Enter your product tracking number.
Processing: Tracking number will be checked at backend in database and if that exists then you can return the product.
Output: Product will be returned and money will be refunded back.

Functional Requirement help center
Description: Help Center.

Input: Write your problem.
Processing: The customer care team will address your problem.
Output: Your problem will be solved.

Non-functional Requirement
Reliability:
1. Our software is reliable however there are some cases in which store may not work properly.
2. Poor internet connection.
3. Browser is not supported by the system.

Usability:
1. User can cancel order at any time.
2. User can add the card credentials.
3. Can check the order status.

Security:
User's integrity is kept in mind. Card details will be kept secret and there is also a purchase protection on store which includes
1. Genuine Products.
2. Safe and secure payments.
3. Free and easy return.

Compatibility:
Store is very compatible with users as there is nothing difficult on the store like ordering some product or adding card credentials and if there is any query you can ask the help center.

Availability:
Daraz store is available 24/7. It's not closed anytime so this means you can do shopping or can sell your product anytime.

Rating:
User can give his/her rating as he/she received parcel. This helps others to buy from the specific vendor. This ensures trust and confident so that others can do shopping from that vendor and from daraz app too
